For Immediate Release - BestCode Introduces the:

Model 88S Security System
Print Invisible, UV Light Readable.
For Product Security and Counterfeit Avoidance.

The Model 88S Security is targeted at product traceability, security, counterfeit avoidance and brand protection applications. Ensure the product in question is truly your product.

Print Real-Time One-Dimensional (1D) and Two-Dimensional (2D) barcodes - Datamatrix, QR Code and other custom dot codes on demand. Barcodes can be encrypted with company and product specific serialization information.

Invisible ink prints clear and invisible - can only be seen when fluoresced with UV light. The codes and marks light up a bright blue color. Printing is permanent to a wide range of substrates - drying immediately on metal, glass, plastic and more. Invisible codes survive high temperatures and remain invisible when exposed to high temperatures, steam processes such as that used for pasteurizations or sterilization processes.

88S Systems are simplified to allow anyone to operate, minimizing operator touches, extending time between human interaction.

- CleanStart™ - automatically cleans printhead eliminating daily and weekly cleanings.
- 10.4" Color Touch Screen—always on, vivid display with large intuitive buttons and status indicators.
- OneTouch™—single step operator functions reduce operator steps.
- Large Volume Ink Tanks—extend time between fluid additions to weeks or months.
- On-the-Fly External Ink Filling—accomplished in less than a minute with no waste.
- AutoOff™ Go Home Button—automate and eliminate time consuming end of day manual routines.

Designed for the world market the Model 88S Security features more than 20 operation and print languages including all Latin based languages, Chinese, Arabic, Cyrillic, Korean, Thai, Vietnamese, Greek, etc. Systems utilize the Unicode character set with capabilities to print over 65,000 different characters and symbols.

BestCode products are backed by CodeProtect™, the industry's best coding system coverage.
